Competing warm-domain stress relations calibrated to 83 tests
Nominal T = -4°C
Nominal T = -2°C
Nominal T = -1°C
Nominal T = -0.5°C
All raw tests in class
MC linear T
MC quadratic T
Quadratic stress
Stress hinge 400
Fixed Eq6 reference
Peak shear stress (kPa)
Measured normal stress (kPa)
Curves evaluate nominal T; dots retain measured T deviations. Grey region exceeds Eq6 nominal stress domain. Curves do not prove a mechanism.
